

# Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

## Alaska

- Presented at Department of Defense Education Activity Pacific Regional Meeting (2023)
- Exhibited and presented at Alaska Society for Technology in Education Conference (2020-2024)

“CYBER.ORG was a game-changer. The curriculum gives my classes an edge while still making the topics easy to understand and more rigorous. The range allows a safe way to teach complex computer interactions without having the physical devices in the room. It also allows complex security simulations that the students find engaging and realistic, without opening them or their computers to any threats or malicious actions.
