

# Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

## Connecticut

- Hosted cyber education workshops in collaboration with the American Radio Relay League annual conferences
- Presented at:
  - Connecticut Computer Science Teacher Association Conference (2018)
  - CTTech Professional Development (2024)
  - Hartford Schools Elementary/Middle Workshop: Free Cybersecurity Resources for Elementary School Teachers (2024)
  - Hartford Schools High School Workshop: Implementing Cybersecurity Into Your CS Class (2024)

“CYBER.ORG provides amazing resources to help teachers anywhere on their cyber journey, whether they are experienced teachers or new to computer science standards. I felt so relieved when I found the CYBER.ORG curriculum and wonderful support community.
