

Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

- Presented at:
 - Indiana Computer Science Teachers Curriculum Showcase (2019)
 - Indiana Association of Career and Technical Educators Conference (2021)
 - NexTech Summer Institute (2021)
 - Indiana Computer Science Professional Development Week (2022, 2024)
 - NexTech Navigate Workshop and Student Event (2024)

“Using the CYBER.ORG practice website as a warm up provides an introduction to ethical hacking outside of virtual machines. Also, displaying in my classroom the CYBER.ORG Career Posters demonstrates the variety of opportunities a person has in the field of Cybersecurity. Thank you CYBER.ORG!
