

Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

Kansas

- Presented at Kansas Career and Technical Education Conference (2022)

“Having trustworthy resources like CYBER.ORG available, especially when starting a program, is invaluable. These resources provide essential support for teachers who may feel alone in the field of cybersecurity, helping to bridge the gap when professional networks are not yet established. I am always pleased with how these resources allow my students to connect with content quickly and meaningfully, fueling their excitement for cybersecurity.
