

Empowering Educators to Teach Cyber

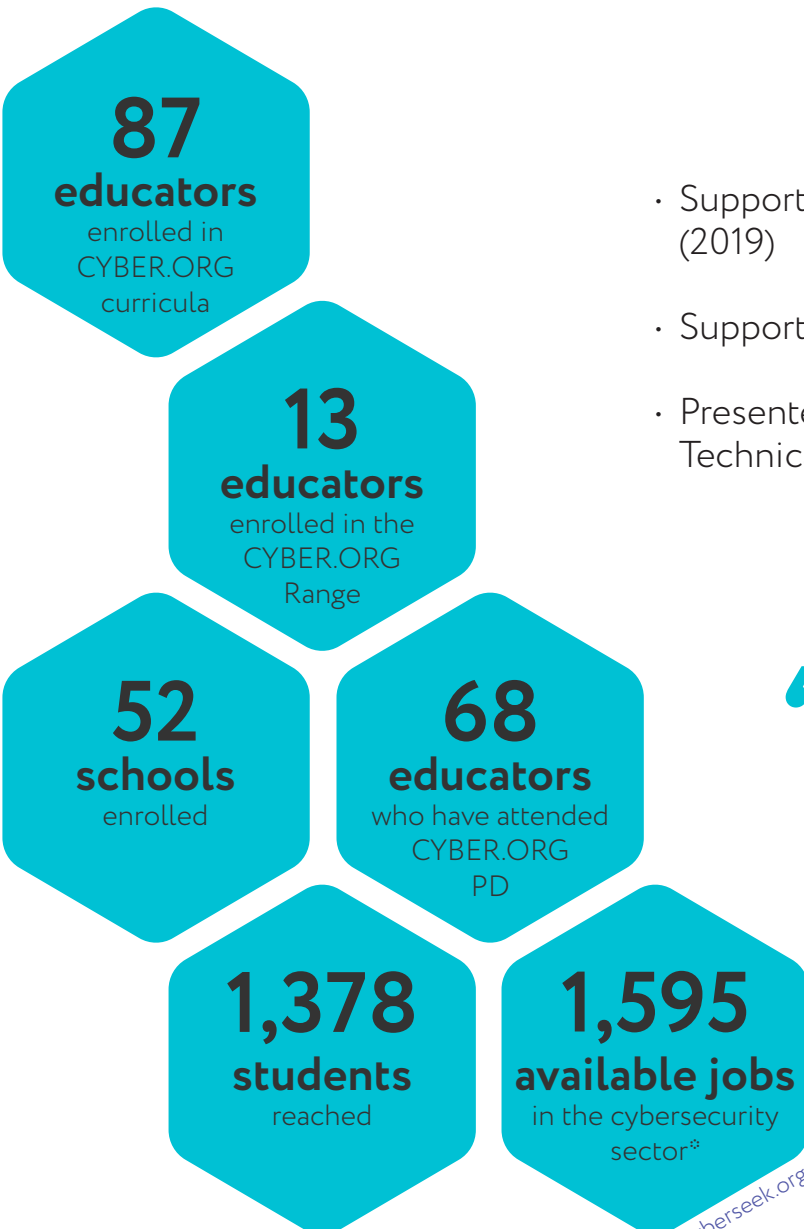

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

Maine

- Supported Maine CSForAll in script workshops (2019)
- Supported GenCyber Student Camp (2022)
- Presented at Maine Association for Career and Technical Education (2023)

“ I recently used the Intro to Cybersecurity lessons on the Pigpen Cipher and the Caesar Cipher with great success. Now my students feel confident they can help in escape room challenges!
