

Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

New Hampshire

- Exhibited and hosted workshops at Christa McAuliffe Technology Conference (2023, 2024)
 - Workshop 1: CYBER.ORG Range Overview
 - Workshop 2: CYBER.ORG Range Activity on Metadata
 - Workshop 3: K-8 Basics

“ We offered Introduction to Cybersecurity this semester. The content is rich with facts about cybersecurity. Students and their families are applying this knowledge to their daily lives. The CYBER.ORG staff has been so supportive in giving ideas and insight.
