

# Empowering Educators to Teach Cyber

The goal of CYBER.ORG is to empower educators as they prepare the next generation to succeed in the cyber workforce of tomorrow.

CYBER.ORG provides educators and caregivers with the curricula and resources needed to deliver industry-leading cybersecurity content to K-12 students. Educators can access in-person, virtual, or self-paced professional development (PD) to facilitate the integration of cybersecurity education into their classrooms. Using the secure, virtual environments of the CYBER.ORG Range, students can practice real-world cybersecurity skills and experience simulated cyber attacks.

Supported by a grant through the Cybersecurity Infrastructure and Security Agency (CISA), CYBER.ORG is able to offer these resources at no-cost across the U.S.

Taking a closer look at CYBER.ORG activity in

## New Jersey

- Presented at:
  - New Jersey Computer Science PD Week (2024)
  - Rutgers Computer Science Summit (2024)
    - Workshop 1: Cybersecurity Education Blooms in the Garden State's K-5 Classrooms
    - Workshop 2: Making the Garden State Cyber Great in 6-8
- Partnered with Garden State Cyber for Train-the-Trainer (2024)

“The provided labs give teachers an easy way to expose students to the skills they will need for continuing their education in cybersecurity.
